Evaluate on an activity-related multi-session trajectory: simulates multiple intermittent interactions

Session 1 Realtime-Perception

Respond

Evidence

Session 2 Cross-session Und.

Respond

Session 3 Adaptive Response

Proactive response based on memory

Interaction ends

New interaction starts

Interaction ends

New interaction starts

Wall-clock time

Persistent memory

What to store matters: raw video, events, summaries...

Must be storage-efficient for deployment

Fast enough for timely adaptive response
